

Mohamed Abdelkader

Backend .NET Developer

Cairo, Egypt | +20 1029684685 | mo.sayed2037@gmail.com
github.com/MoSayed335 | linkedin.com/in/mo7amed-abdelkader

PROFESSIONAL SUMMARY

Backend .NET Developer with hands-on experience designing and building scalable, secure RESTful APIs using ASP.NET Core, C#, and SQL Server. Proficient in implementing JWT Authentication, Role-Based and Policy-Based Authorization, and Clean Architecture principles including SOLID, Layered Architecture, and DTO Pattern. Experienced in integrating third-party services such as Stripe Payment Gateway and delivering production-like backend systems across E-Commerce, Education, and Entertainment domains.

TECHNICAL SKILLS

- Languages & Frameworks: C#, ASP.NET Core, Web API, ASP.NET Core MVC
- Databases: SQL Server, Entity Framework Core (EF Core), LINQ
- Architecture & Design: SOLID Principles, Layered Architecture, DTO Pattern, Repository Pattern
- Security: JWT Authentication, Refresh Tokens, Role-Based Authorization, Policy-Based Authorization, OTP Verification
- Integrations: Stripe Payment Gateway, Email Services, SignalR
- Tools: Git, GitHub, Postman, Visual Studio

SOFT SKILLS

Problem Solving & Analytical Thinking | Team Collaboration & Communication | Time Management & Prioritization | Adaptability & Quick Learning | Attention to Detail | Leadership & Mentoring

LANGUAGES

Arabic — Native | English — Professional Working Proficiency

EXPERIENCE

Backend .NET Trainee — Eraa Soft

Jan 2025

- Completed intensive training program focused on ASP.NET Core Web API development and SQL Server
- Built production-like backend applications implementing JWT authentication, Role-Based Authorization, and Stripe payment integration
- Designed RESTful APIs following DTO Pattern and Layered Architecture, applying SOLID principles throughout

Freelance Backend Developer

Jan 2025 – Present

- Developed multiple backend systems using ASP.NET Core for E-Commerce, Student Management, and Exam Management domains
- Applied secure authentication & authorization, Clean Architecture, and scalable RESTful API design patterns across all projects

PROJECTS

E-Commerce Web API | github.com/MoSayed335/Ecommerce

- Architected a full E-Commerce backend with 10+ RESTful endpoints covering Products, Categories, Cart, Orders, and User management using DTO Pattern and Layered Architecture
- Implemented JWT Authentication with Refresh Token rotation, Role-Based Authorization (Admin / Customer / Guest), OTP verification, and email confirmation workflows
- Integrated Stripe Payment Gateway for real-world transaction handling; added structured logging, database seeding for roles and default admin; refactored from MVC to RESTful Web API

Cinema Management System | github.com/MoSayed335/Cinema

- Developed a comprehensive backend managing movies, cinemas, showtimes, seat types (VIP/Regular), and ticket bookings with automatic price calculation
- Designed 8+ RESTful API endpoints with Role-Based Access Control, integrated logging, DTO Pattern, and Layered Architecture for scalability

Student Management System | github.com/MoSayed335/Student_Manegment_System

- Built a full academic management backend covering Students, Instructors, Departments, and Courses with a three-role permission system (Admin / Instructor / Student)
- Designed a structured relational database in SQL Server; implemented CRUD APIs with optimized data access using EF Core and LINQ

Student Exams System | github.com/MoSayed335/Exams_Manegment_System

- Built API endpoints for exam submission, automated evaluation, and result tracking across multiple exam scenarios
- Designed a normalized database schema for exams, subjects, questions, and grading workflows

Todo List API (MVC) | github.com/MoSayed335/ToDoList

- Lightweight task management API using ASP.NET Core MVC with 5+ CRUD endpoints; applied clean code practices and structured API design

EDUCATION

Bachelor of Computer Science — Cairo Higher Institute

Expected: 2027

GPA: 3.04 / 4.0
